Or points	numerical values assigned to represent the difficulty level of a task or challenge. The scale ranges from 1 to 7, with the exception of 4, which is deliberately excluded to avoid a neutral midpoint and ensure clearer distinctions between levels of difficulty. Lower values (1–3) indicate easier tasks, while higher values (5–7) signify more challenging ones (these restrictions are for points per person not per entire task).
WorkMultiplyer	WorkMultiplier is a numerical value assigned by the team lead in collaboration with the technical lead to determine a bonus multiplier for tasks completed either under time pressure or in large quantities, where the technical difficulty is lower but the effort, speed, or volume of work adds significant value. Value: 1.0-1.6 (1-default value)
"+Mihai"
